🪪 PROFILE

I'm a motivated IT professional with a strong passion for technology, software development, and innovation. My interest in computing began after high school and led me to earn the A+ certification, building a solid technical foundation. Currently pursuing a BSc in Computing at the University of Greenwich, I'm developing expertise in networking, programming, and web technologies. I stay current with industry trends through online learning and hands-on projects, and I'm actively building skills in modern frameworks like React to create responsive, user-focused applications.

English Upper-Class Intermediate Course
SCBI - Sandford City Business Institution
Jan 2023 – March 2023 | Yangon

PROJECTS

Home Appliance Management System
Jan 2023 – May 2023
Completed an academic project to develop a C# home appliance rental application featuring user authentication, shopping cart, order processing, search capabilities, and administrative functions. Employed object-oriented programming principles, created a comprehensive class diagram, and performed extensive testing to ensure reliability and effective error handling. This project enhanced my understanding of software design, object-oriented development, and quality assurance practices.

Car Park Membership & Payment Management System
Jan 2023 – May 2023
Completed an academic project involving the design and implementation of a Microsoft Access database alongside Excel tools to support membership and payment automation for a car parking business scenario. Created validated input forms and developed macros to facilitate efficient membership renewal processes and comprehensive reporting.

Camping website
June 2023 – Oct 2023
Developed a responsive camping website as part of an academic project, employing HTML, CSS, and JavaScript to create an intuitive user experience and streamline reservation management. This project enhanced my skills in front-end development and user-centered design principles.

Social Media Campaign Website
Jan 2024 – May 2024
Developed a Social Media Campaign website as part of an academic project, employing PHP and vanilla JavaScript. The project was based on a case study focused on promoting user awareness regarding safe practices on social media platforms. This experience enhanced my proficiency in full-stack web development and effective communication through digital media.

University Idea Management System
Jan 2025 – May 2025
Collaborated as a full-stack developer on a university group project to design and implement a web-based Idea Management System with role-based access controls. The system allowed anonymous idea submissions, voting, and commenting, with permissions managed according to departmental roles. My responsibilities included developing secure user authentication, implementing data encryption, and building key components across both front-end and back-end. This experience strengthened my skills in Node.js, React, and application security fundamentals.
